Huntsville, AL, Von Braun Center, February 24 - 27, 2009
Space, Propulsion and Energy Sciences International Forum
W1. Workshop on Future Energy Sources

Brain-Controlled Cold Plasma

Abstract: Brain-Controlled Cold Plasma (BCCP) is a hypothesis aimed at explaining two cases of levitation [1,2] and the origin of inertial forces [3], under the stipulations that (i) the so-called “dark energy” of empty space renders the conservation of gravitational energy and momentum impossible in principle, (ii) no quadrupole gravitational radiation can exist in principle, and (iii) the human brain (not mind) has access to the atemporal “handshaking” medium in Cramer’s interpretation of QM [4].

“It was during this time, in 1868, that one of Home's most legendary events occurred. During a séance at the home of Mr. S.C. Hall (at No. 15 Ashley Place), Home demonstrated his abilities before a crowd of people. Home effortlessly floated across the room, passed out an open third story window, and returned the same way he left.

“Lord Linksay recorded the event:

I was sitting on December 16, 1868, Lord Adare's rooms in Asley Place, London, S.W., with Mr. Home and Lord Adare and cousin of his. During the sitting, Mr. Home went into a trance, and in that state was carried out of the window in the room next to where we were, and was brought in at our window. The distance between the windows was about seven feet six inches, and there was not the slightest foothold between them, nor was there more than a 12 in projection to each window, which served as a ledge to put flowers on. We heard the window in the next room lifted up, and almost immediately after we saw Home floating in the air outside our window. The moon was shining full into the room; my back was to the light, and I saw the shadow on the wall of the windowsill, and Home's feet about six inches above it. He remained in this position for a few seconds, then raised the window and glided into the room feet foremost and sat down. Lord Adare then went into the next room to look at the window from which he had been carried. It was raised about 18 inches, and he expressed his wonder how Mr. Home had been taken through so

narrow an aperture. Home said (still in a trance) " I will show you," and then with his back to the window he leaned back and was shot out of the aperture head first, with the body rigid, and then returned quite quietly. The window is about 70 feet from the ground."

[Ref. 3] James F. Woodward, Gravitation: The Origin of Inertia, 1998,
<http://physics.fullerton.edu/~jimw/general/inertia/index.htm>

"The act of pushing on something causes a disturbance in the gravitational field to go propagating off into the future. It makes stuff (the "absorber") out there wiggle. When the stuff wiggles it sends disturbances backward (and forward) in time. All the backward traveling disturbances converge on what we're pushing and generate the inertial reaction force we feel. No physical law is violated in any of this. And nothing moves faster than the speed of light. It only seems so because of the advanced waves traveling at the speed of light in the backward time direction."

[Ref. 4] J. Cramer, *The Transactional Interpretation of Quantum Mechanics*, *Reviews of Modern Physics* 58, 647 (1986)

"This, in a simplified one-dimensional form which will be expanded below, is the emitter-absorber transaction. The emitter can be considered to produce an "offer" wave F_1 which travels to the absorber. The absorber then returns a "confirmation" wave to the emitter and the transaction is completed with an "handshake" across space-time. To an observer who had not viewed the process in the pseudo-time sequence {footnote 14} employed in the above discussion, there is no radiation before T_1 or after T_2 but a wave travelling from emitter to absorber. This wave can be reinterpreted as a purely retarded wave because its advanced component G_2 , a negative energy wave travelling backwards in time from absorber to emitter, can be reinterpreted as a positive energy wave travelling forward in time from emitter to absorber, in one-to-one correspondence with the usual description {footnote 15}."

Fine. I just wanted to ask your reviewers to explain the origin of inertia and the mechanism by which it operates, in line with the principles of locality and relativistic causality. Then of course all "atemporal" hypotheses (Woodward and Cramer) can and should be rejected.

This verdict can only be delivered by some mind reader who knows the origin of inertia and the mechanism by which it operates (cf. above), and have "read" my intended talk on BCCP (still not written on any physical media).

I wish you best of luck with your Conference.

Sincerely,

D. Chakalov

You personally informed me that my abstract on "Workshop on Future Energy Sources" has been rejected,

<http://www.god-does-not-play-dice.net/BCCP.pdf>

In my opinion, the cleanest and really unlimited energy source is the so-called "dark energy of empty space". Pity nobody showed even a trace of interest.

Anyway.

> SPESIF-2009 is shaping up nicely.

Good. Please remove my name and email address from your records.
