27 March 2022

I believe the force of Life empowers all quantum systems, gravity, and the entire [physical universe](#), which makes it the [fifth force](#) of Nature.

I am ready to demonstrate brain-controlled quantum tunneling (BCQT). For example, the rice in the left jar can "[tunnel](#)" into the empty jar.

This is BCQT driven by the [fifth force](#). Not by some Chinese "[magic](#)". In my opinion, no physical field nor gravity ([Zhaoyan Wu](#)) can provide the energy in BCQT. Besides, we cannot trust any "[street magic](#)".

**NB:** All experiments in [spacetime engineering](#) must be recorded under strictly controlled laboratory conditions at some renowned technical institute or laboratory in the EU, and under the supervision of qualified physicists and technicians. My only precondition is that the physicists, supervising the experiment, will publish their report in a peer reviewed academic journal available online (e.g., [Frontiers in Physics](#)). I will ask my new (still unknown) colleagues to choose their preferred title and format of their report, and also the list of authors.

We need new clean energy sources and spacetime engineering may be *the only* chance to avoid [climate catastrophe](#). Time is running out!

---

## Post Scriptum

On January 21st this year, I contacted many laboratories in Germany, Switzerland, Spain, Austria, France, The Netherlands, Greece, and Italy ([labs.pdf](#)) – read **NB** [above](#). On the next day, 22 January 2022, I wrote to many experts in theoretical physics ([email.pdf](#)). They know about my research program for many years, yet are still in **denial**. The *only* way to make them read and think is the official publication [above](#). Otherwise they will ignore my experimental work and call it “**magic**”.

Suppose – hypothetically – that I fly over the River Thames in London. Many of the tourists will be fascinated (they *love* [free entertainment](#)), but will the experts in theoretical physics show interest in the [arrow of spacetime](#), [spacetime topology](#) and the [origin of gravity](#)? When [pigs fly](#).
